

## Greenland's Strategy on Sustainable Construction

- Contribute to dialogue in the industry to make collective decisions for common goals and direction.
- Sustainable development starting from the government to support sustainability in practice and create a common foundation on which the industry can build together.
- Create healthy, high-quality buildings and homes that benefit both society and users today and for future generations, and to establish a shared understanding of sustainability across the sector.

## Construction Framework for Sustainability (DK)

- Sector collaboration across the value chain with three overall ambitions within CO2, circular economy and biodiversity

## Renovation and New Build (DGNB - Green Building Council Denmark)

- New certification manual for "DGNB Renovation and new build"
- Fewer but more strict criteria, enhanced focus on performance and promoting renovations and aligning with EU taxonomy

## Norwegian Climate Partnership

- Norwegian government and partners from the construction sector meets to discuss how to reach the 2030 and 2050 goals
- A task force has made a knowledge foundation (June 2024) to debate what such a climate partnership should contain.

## Bärkraft (Åland) - Network

- Network working towards a common goal of a viable and sustainable region
- Focusing eg. on renovation, renewable materials, energy efficiency and waste reduction

## Icelandic Sustainable Construction Roadmap to 2030

- 74 actions to support more sustainable construction
- Focus points includes building materials, construction stage, use stage, circularity, LCA, certifications, eco-friendly urban areas and incentives for transition
- Joint project between market representatives and public authorities in Iceland

## The Circular Economy Green Deal (FI)

- Government initiative, with Green Building Council Finland facilitating construction and building sector and further supporting companies in actions taken
- Strategic commitment model, where operators voluntarily commit to goals and measures promoting reduction of natural resource and a carbon-neutral circular economy

## Fossil-free Sweden - Swedish Roadmap 2045

- Goals to reach climate neutral valuechain in 2045
- Focus areas includes collaboration, knowledge and competences, innovation, digitalisation and leadership
